Instructions

^ COLLAPSE ^

Overview Video: <https://youtu.be/3pDB8m62tgM>

1. Create a repository on github, use the format `ucid-course-section` as the repository name.
2. Make sure it's set to private
3. Go to Settings -> Manage Access -> Invite Collaborator -> Search for my ID **MattToegel** and send an invite; if your section has a grader do the same for their github username (refer to course announcements)
 1. **Note:** Once in a while the invite doesn't get created correctly and you'll need to resend it, keep an eye on the acceptance of the invite since this is required for further HW validations. A comment will be left on Canvas for the submission if the invite is missing at the time of grading).
4. From the terminal / command line create a new branch called **M1-GettingStarted**
5. Create a README.md file and add it to the branch
6. Fill in some basic details:
 1. Course/Section
 2. Your name (first is fine)
 3. Brief info about yourself you'd like to share
7. Hint after creating the file
 1. `git add README.md`
 2. `git commit -m "my readme file"`
 3. `git push origin M1-GettingStarted`
 4. Create a pull request from this branch (via github.com)
 5. Don't merge/close the pull request yet
8. Fill in the below deliverables.
9. Once finished, ensure it's saved and click the "Export" button.
10. Move the generated PDF into your local repository folder at any location of your choosing.

11. Do the following commands

1. `git add .` (this will add all changes)
2. `git commit -m "adding output file"`
3. `git push origin M1-GettingStarted`

12. Go back to github and merge the pull request that was opened

13. Go to Canvas and upload the same PDF that you just downloaded and pushed to GitHub

Note: Having the submission saved and active keeps it eligible for grading.

Branch name: M1-GettingStarted

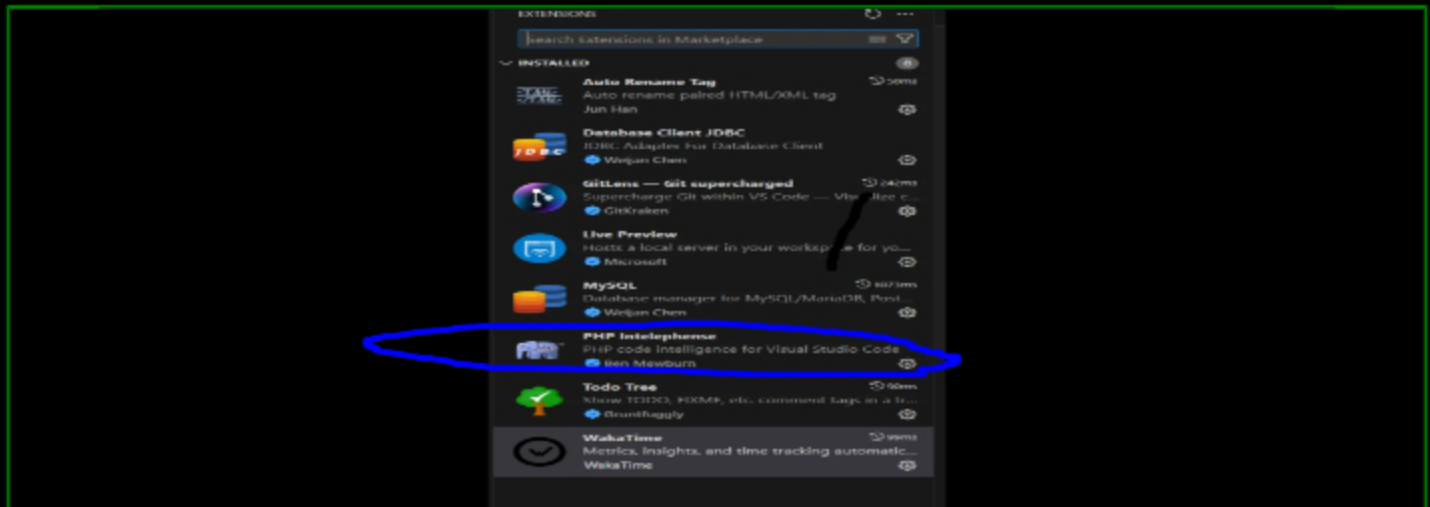

Tasks: 4 Points: 10.00

IDE Setup Evidence (2 pts.)

^COLLAPSE ^

Task #1 - Points: 1
Text: Required Extensions

#1) Show the PHP Extension Installed and Enabled

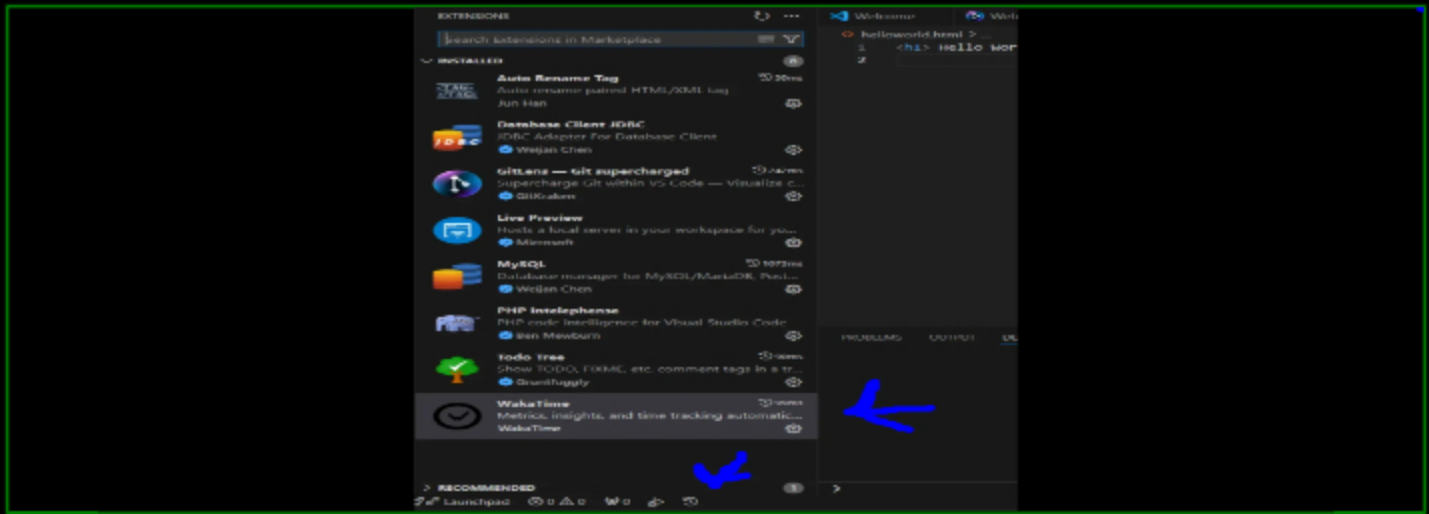

Caption (required) ✓

Describe/highlight what's being shown
Shows PHP extension installed

#2) Show WakaTime Installed and Enabled (include bottom toolbar with the clock icon)

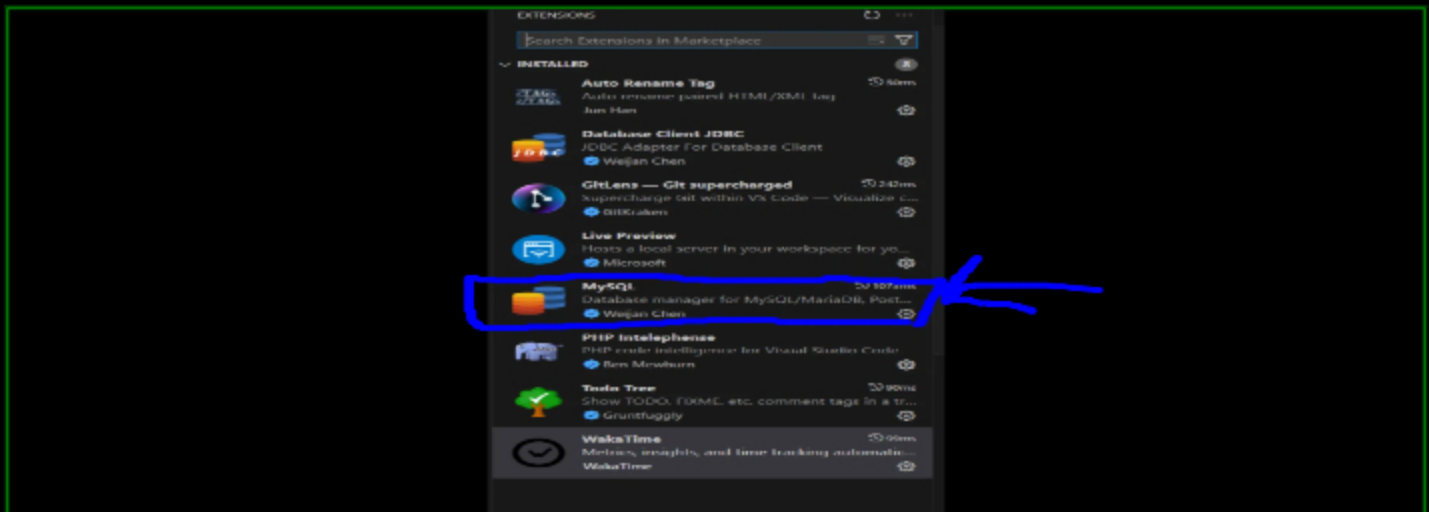

Caption (required) ✓

Describe/highlight what's being shown

Shows Waka Time installed, time is not showing because no work has been done or recorded.

#3) Show the MySQL Extension Installed and Enabled

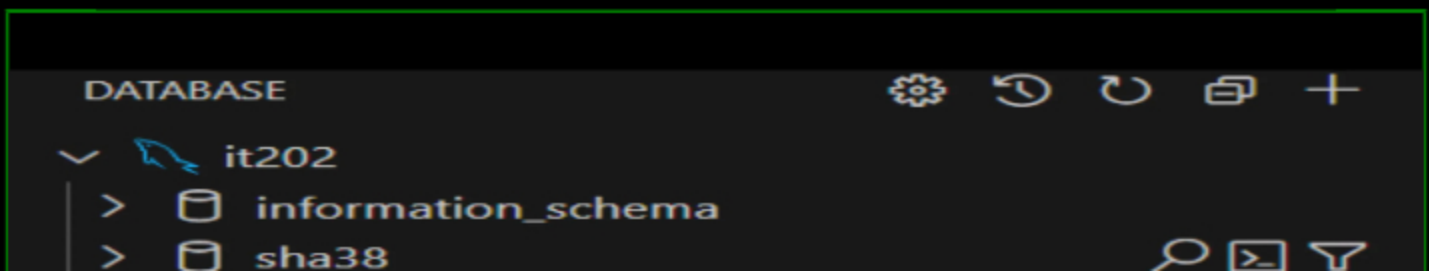

Caption (required) ✓

Describe/highlight what's being shown

MySQL is installed and enabled

#4) Show the MySQL Side Panel showing DB with UCID

Caption (required) ✓

Describe/highlight what's being shown

Showing my data base is created

Reflection (6 pts.)

^COLLAPSE ^

Task #1 - Points: 1

Text: Talk about what you learned during this module, anything interesting, new, etc.

i Details:

Should be at least a few sentences for full credit

Response:

I learned how to setup mySQL and Git bash. It opened my eyes to how everything is really is connected to one another. I also created a repository in Github and began a pull request. It was confusing at first but it soon came together and I realized how it worked. In addition, I also learned some commands on the terminal, such as cd, ls, Pwd, and Cat.

Task #2 - Points: 1

Text: Did you have any issues? If so, how did you resolve them? If no issues, just type "no issues"

Response:

I had issues connecting my terminal to Github because it was stating permission denied. I realized I skipped over a slideshow about how to get over that permission denied. I ran the eval and ssh-add commands which worked.

Pull Request (2 pts.)

^COLLAPSE ^

Task #1 - Points: 1

Text: Add the pull request link here (it should end in /pull/#)

URL #1

<https://github.com/ShahadatAnadil/sha38-it202-452/pull/1>
