    2. Links Lesson 11.1
    3. Lists Lesson 12.1
    4. Selectors 16.1 - 16.5

Guide:

1. Make sure you're in the main branch locally and `git pull origin main` any pending changes

2. Make a new branch per the recommended branch name below (`git checkout -b ...`)

3. Fill in the items in the worksheet below (save as often as necessary)

4. Once finished, export the worksheet

5. Add the output file to any location of your choice in your repository folder

6. Check that git sees it via `git status`

7. If everything is good, continue to submit

8. Track the file(s) via `git add`

9. Commit the changes via `git commit` (don't forget the commit message)

10. Push the changes to GitHub via `git push` (don't forget to refer to the proper branch)

11. Create a pull request from the homework related branch to main (i.e., main <- "homework branch")

12. Open and complete the merge of the pull request (it should turn purple)

13. Locally checkout main and pull the latest changes (to prepare for future work)

14. Take the same output file and upload it to Canvas

               Text: Fill in the below prompts

#1) What concepts/topics were totally new to you?   👁

Explanation (required) ✓

Mention specific concepts/topics

Some of the javascript were new to me, specifically the dom section 23.1-23.14. It's nothing really confusing about it, I just was never taught this before.

#2) What concepts/topics were you already familiar with? 👁

Explanation (required) ✓

Mention specific concepts/topics

📄 PREVIEW RESPONSE

I was already familar with majority of the html and css lessons such as the styling, elements, formatting and selectors. I took a class before this class which went focused mainly on html, css, and bootstrap.

#3) What topics do you still not feel confident about? If confident, explain why. 👁

Explanation (required) ✓

At least a few reasonable sentences.

📄 PREVIEW RESPONSE

One subject I am still uncomfortable with with responsive design in html, the media queries. I was taught this before in my is117 class, but I never grasphed it fully. I know it's suppose to make the user experience better by making sure the content fits into the approiate screen but I have no clue how that works and how to make it work.
